EDUCATION

Birmingham City University

July 2026

1st class Bachelor of Science with Honours in Computer Games Technology

Birmingham, UK

- **Dissertation:** A study that focuses on developing machine learning agents capable of imitating human driver behaviour using recorded telemetry data, and their effectiveness of creating a more dynamic and personalised racing experience.
- **Console Game Development:** Spearheaded the development of a complex voxel terrain generator while simultaneously serving as the project's main coordinator. Maintained high production standards for my own technical assets while proactively monitoring colleague's progress, ensuring resources adhered to a strict performance budget.
- **Independent Project:** Independently developed a slot-car racing game during a 3-month gap to sharpen programming skills under a strict timeframe. Successfully constructed a comprehensive game loop and implemented new emerging Unreal Engine technologies, to display at the university's annual industry exposition.
- **AI Programming for Games:** Developed an agent-driven project focused on complex agent behaviours, successfully implementing FSM's and Behaviour Trees within a streamlined, object-oriented architecture. Ensured a highly scalable codebase that prioritised core logic efficiency and modular design in Unity.
- **Game Asset Pipeline / 3D Game Programming:** Co-modules covering the full development cycle of game assets from scratch through to a completed 3D game in Unreal Engine.

WORK EXPERIENCE

Birmingham City University

Sep. 2025 – January. 2026

Visiting Lecturer

Birmingham, UK

Recruited by course lead to return for a separate module based on my proficiency in previous modules.

- Selected by faculty as a Technical Mentor for the Game Studio Production module. Bridged the gap between theoretical instruction and practical application. Provided targeted intervention for 30 students that requested additional support.
- Supervised the development of a group plane simulation project, providing guidance to the project leaders and members.
- Assisted in a technical field study to an aviation museum, overseeing a student cohort during the LiDAR and laser-scanning acquisition of aircraft assets for high-fidelity 3D reconstruction.

VOLUNTEERING

[NDA] Turn 10 Studios

Feb. 2025 – June 2025

BoP (Balance of Performance) QA Specialist

Voluntary remote role. Under NDA, so specific details cannot be disclosed.

- Responsible for the technical standardisation of game mechanics. Leveraged my experience and background to serve as the lead BoP evaluator in a specialised group of 7.
- Took the initiative to manage a centralized data-tracking system, tallying objective telemetry and performance metrics to facilitate the implementation of modifiers and ensure project-wide parity.

HIGHLIGHTS

- **Achievements:**
 - Best in Class CGT - Innovation Fest 2026
 - Shortlisted for Best Race Event - Golden Tank Awards 2024.
- **Skills:** C++; C#; Unity Engine; Unreal Engine; GitHub; Maya; Adobe Photoshop; Python; JavaScript;
- **Interests:** Elite-level online competitive racing, Car culture, Boulderling, Gym, Game jams, Twitch streaming
